Princeton University, located in Princeton, N.J., has 140 buildings on its one mile-square campus. Nassau Hall is the oldest, dating to 1747.

The computer center, B7 Prospect, which was built in 1969, is used to centrally manage the university's growing networks.

Princeton's FDDI system was installed throughout the main campus, taking advantage of old wiring access routes in basements and steam tunnels on the 250-year-old campus.

A microwave connection between the main campus and the Forrestal research campus circumvents natural barriers.

Public computer clusters allow university users to access the network at various campus sites. The Interactive Computer Graphics Lab offers graphics applications for students' projects.

The Whittaker bridges provide physical connection with separately functioning subnetworks, such as Dormnet.
